The background of the page features a dark, textured image of crushed aluminum cans and debris. At the bottom, there is a prominent red wavy pattern that looks like a stylized ribbon or liquid.

# ALUMINUM RECOVERY

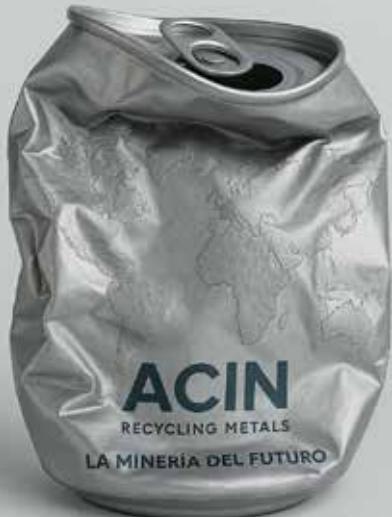

**Do you know everything that can  
be obtained from aluminum  
recovery and how to put it into the  
most profitable way possible?**

The production of aluminum from scrap means a 95% saving in energy and emissions. Not only that: in the recycling process, this metal retains all its properties and characteristics and can be recycled an unlimited number of times.

# ALUMINUM IS THE MOST VALUABLE PACKAGING METAL.

It will be a fundamental raw material in an increasingly circular economy.

## INTEGRAL MANAGEMENT

We exhaustively control all the phases that make up the management of metals such as aluminum:

HANDLING

PROCESSING

TRADING

At ACIN Recycling Metals we are specialized in non-ferrous and ferrous integral waste management: **recycling, transformation and marketing.**

## ALUMINUM IS A SPECIAL RAW MATERIAL FOR ITS QUALITIES:

- Lightness compared to other metals
- Ability to conduct heat and electricity
- Malleability
- Corrosion resistance
- Unlimited recycling times
- Sustainability

## SOLID COMPANY WITH 3 PLANTS IN GIRONA.

We enjoy our own facilities and machinery which means not only an increase in production and a higher level of control of processes, but also a reduction in delays, costs and unexpected events.

#### **Operating volume 2024**

We processed 150,000 tons using state-of-the-art technology such as Metal Sorters, X-ray systems, and LIBS.

For 2025, with our new processing capacity, we expect to increase this to 230,000 tons.

On the other hand, the extraction of bauxite and its transformation into aluminum requires large amounts of energy and a high environmental cost.

**THERE IS SO MUCH LEFT TO RECYCLE, AND AT ACIN RECYCLING METALS WE ARE READY.**

\*Association for the Recycling of Aluminum Products (ARPAL) in collaboration with FER (Federación Española de Recuperación).

Our goal is to generate value through the sustainable transformation of metals such as aluminum under a socially responsible and environmentally friendly model, in line with the Sustainable Development Goals (ODS):

**Reduce, Reuse and Recycle.**

**MORE THAN  
150.000 TN  
OF METALS  
PROCESSED  
PER YEAR.**

## **HOW WE WORK**

At ACIN Recycling Metals we are experts in the integral management of non-ferrous and ferrous waste: recycling, transformation and commercialization. We have been in charge of one of the most dynamic and reliable companies in ferrous and non-ferrous waste management for almost a decade.

We work permanently according to the LME index (London Metal Exchange Market), the most trustworthy index for the industrial metals market in the world, and the one we use to reference the best prices we offer our customers.

Our proximity and knowledge of the production chain of this market makes us a solvent supplier with the capacity to offer a flexible and competitive response to our customers.

# SHREDDED ALUMINUM EXTRUSION

- 1000MT per month
- Less than 1% attachment
- 94% Liquid recovery

## AT ACIN RECYCLING METALS YOU WILL FIND:

- Reception and storage of metals
- Classification area
- Pressing or cutting area
- Storage area for pressed or sheared metals
- Waste storage areas

**WE COLLECT,  
MOVE, SEPARATE,  
PROCESS, IMPORT  
AND EXPORT ALUMINUM.**

**Find out what we can do for you.  
When we recycle aluminum...  
Our clients win.  
The planet too.**
